Howdy, I've got a 2016 Mazda 3 2.5L. I had test drove both models, the 2.0L and the 2.5L. Both were manual, both were really great cars compared to my last, (2015 Hyundai Veloster Base) I went with the 2.5L because it had many more features, the center console had an arm rest, and the car is MUCH more response in the low end.

EcoBoost (for 2.0L) Duratec is a brand name of the Ford Motor Company used for the company's range of gasoline-powered four-cylinder, five-cylinder and six-cylinder passenger car engines. The original 1993 Duratec V6 engine was designed by Ford and Porsche. Ford first introduced this engine in the Ford Mondeo. Over time, "Duratec" became an omnibus name for Ford's gasoline engines unrelated to ...

From a Mazda6 3.0L V6 to a Mazda6 2.3L to a Mazda3 2.0L. All manuals. The difference between the two 6's was negligible in most driving, and the 3 has the same HP and much less weight. I've found the 2.0L more than sufficient. But I don't fit with a sunroof and the 2.5L is only available in GT trim with a sunroof standard.

First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

This important new book on criminology is a major attempt to evaluate actual victim compensation programs as well as their political and economic contexts, through the eyes of the victims themselves. Elias traces the experiences of violent-crime victims throughout the entire criminal justice process, comparing New York's and New Jersey's victim compensation programs. He shows how programs differ when compensation is viewed essentially as welfare and when it is viewed as a right. The study uses extensive interviews with officials and with violent crime victims. The study indicates victim compensation programs largely fail to achieve their stated goals of improving attitudes toward the criminal-justice system and the government. The programs produce poor attitudes toward government and criminal justice.

This volume contains the proceedings of the International Conference on Vertex Operator Algebras, Number Theory, and Related Topics, held from June 11 – 15, 2018, at California State University, Sacramento, California. The mathematics of vertex operator algebras, vector-valued modular forms and finite group theory continues to provide a rich and vibrant landscape in mathematics and physics. The resurgence of moonshine related to the Mathieu group and other groups, the increasing role of algebraic geometry and the development of irrational vertex operator algebras are just a few of the exciting and active areas at present. The proceedings center around active research on vertex operator algebras and vector-valued modular forms and offer original contributions to the areas of vertex algebras and number theory, surveys on some of the most important topics relevant to these fields, introductions to new fields related to these and open problems from some of the leaders in these areas.
