What Is Acne Rosacea? Rosacea is an inflammatory skin disorder that causes a red rash to appear on the face. It is typically concentrated around the nose and cheeks, but has also been known to affect the eyes. Acne rosacea is a subtype of rosacea that causes the appearance of inflamed, red bumps known as papules and pustules in addition to flushed skin. Pustules are papules that become swollen with bacteria and white blood cells, which degrade and cause white pus to form

*Acne and Rosacea: The Complete Guide: Bowser, Alison ...*

What Is Acne Rosacea? Acne rosacea is a subtype of the skin condition rosacea, and is so called due to its similarities between it and acne vulgaris. It is also known as sub-type 2 rosacea and papulopustular rosacea. Both men and women are known to develop rosacea, although the symptoms of acne rosacea

are often more severe in men, whereas more women are reported to have the condition.

*Acne and Rosacea: The Complete Guide: Bowser, Alison ...*

The NHS suggests that one in 10 of us in the UK has rosacea. But the thought of showing mine to someone who I'm trying to impress causes me to have a total meltdown – it's just never going to happen. In short, rosacea is a chronic inflammatory skin condition that prompts my skin to redden – and hugely impacts the way that I see myself.
