Quick Aphasia Battery (QAB) The Quick Aphasia Battery (QAB) aims to provide a reliable and multidimensional assessment of language function in about a quarter of an hour, bridging the gap between comprehensive batteries that are time-consuming to administer, and rapid screening instruments that provide limited detail regarding individual profiles of deficits.

Quick Aphasia Battery (QAB)

(The Aphasia Institute, Canada) Battery (WAB) is a diagnostic tool used to assess the linguistic skills and main nonlinguistic skills of adults with aphasia Aphasia is an acquired disorder caused by an injury to the brain and affects a person ’ s ability to communicate. It is most often the result of stroke or head injury.

Western Aphasia Battery (WAB) - Strokengine

Western Aphasia Battery (WAB) is an instrument for assessing the language function of adults with suspected neurological disorders as a result of a stroke, head injury, or dementia. There is an updated version, the Western Aphasia Battery-Revised (WAB-R). It helps discern the presence, degree, and type of aphasia. It also measures how the patient performed on the test to provide a baseline so they can detect changes throughout their time in therapy.

Western Aphasia Battery - Wikipedia

The Western Aphasia Battery-Revised (WAB-R) assesses linguistic skills most frequently affected by aphasia, plus key nonlinguistic skills, and provides differential diagnosis information. Adaptable to various administration settings from hospital room to clinic, it provides a baseline level of performance to measure change over time.

WAB-R Western Aphasia Battery-Revised

Currently, the most widely used English language comprehensive batteries are the Boston Diagnostic Aphasia Exam (BDAE) , the Western Aphasia Battery (WAB) , and the Comprehensive Aphasia Test (CAT) ; see for review of these and other tests. These batteries have been thoroughly validated, and provide a comprehensive assessment of an individual ’ s strengths and weaknesses in multiple language domains.

A quick aphasia battery for efficient, reliable, and ...

The Western Aphasia Battery–Revised (WAB-R) is the updated version of the highly respected and widely used instrument for assessing adult patients with aphasia. It is an individually administered assessment for adults with acquired neurological disorders (e.g., as a result of stroke, head injury, dementia).

Western Aphasia Battery-Revised - Pearson Clinical

The Western Aphasia Battery (WAB) is used routinely to evaluate adult language function, and has high internal consistency, test-retest reliability, and validity. WAB is also widely used to determine the presence, type, and severity of aphasia. The Western Aphasia Battery (WAB) -

This is a Sample version of the Western Aphasia Battery (WAB)

The test contains a cognitive screening, a language battery and a disability questionnaire. The authors of the comprehensive aphasia test take account of current linguistic and psychological theory and other variable that impact aphasic performance. The CAT was published in 2005 and was the first new aphasia test in English for 20 years.

Comprehensive aphasia test - Wikipedia

The Bilingual Aphasia Test (BAT) was designed to assess each of the languages of a bilingual or multilingual individual with aphasia in an equivalent way. The various versions of the BAT are thus not mere translations of each other, but culturally and linguistically equivalent tests. The criteria of cross-language equivalence vary with each task.

Bilingual Aphasia Test (BAT) | Linguistics - McGill University

Western Aphasia Battery-Revised (WAB-R): a complete assessment of language skills related to aphasia in all modalities. Provides for differential diagnosis. Boston Diagnostic Aphasia Evaluation-3rd Edition (BDAE-3) and Boston Naming Test (BNT): a complete aphasia assessment based on all language modalities. The BNT is a shorter test for ...

Aphasia Assessment Tools | Lingraphica

This project has included a core battery of tests that were developed from the 2nd Edition of the Boston Diagnostic Aphasia Examination (working with Harold Goodglass and Edith Kaplan) that we now call the SSAT (Salk Sign-language Aphasia Test), additional language probes (including sign language specific probes) and visuospatial tests.
