IFM - How to load a config file onto a Cisco router

Configuration files can be stored on network servers. You can configure the access server to automatically request and receive two configuration files from the network server:

- Download the Network Configuration File
- Download the Host Configuration File.

The first file the server attempts to load is the network configuration file.

How to configure Cisco switches - A step by step guide

If it is not set to (config-register 0x2102) then your router will not load startup-configuration file. To resolve this go to configuration mode and change the value to be config-register 0x2102. then copy startup-config to running-config and. then write memory (or copy running-configuration to startup-configuration) and reload the router.

---

Solved: Won't load startup config - Cisco Community

Issue the show running-config command, and allow time for the router to complete its response. You will see: Building configuration... followed by the configuration. On the HyperTerminal menu, choose Transfer > Capture Text > Stop in order to end the screen capture. Open the config.txt file you created in any text editor, such as Notepad or Wordpad.

---

Back up and Restore Configuration Files - Cisco

copy startup-config running-config is not a reliable (or sometimes effective) way to remove changes made in the running config. The copy to running config does a merge of the two config files. Where the same command exists in both configs the command from startup will replace the command in running.
