Does God really exist? Are science and religion incompatible bedfellows? Surprisingly, Charles Darwin himself, whose theory of evolution did more than anything to ignite these fundamental debates, refrained from commenting in depth about its philosophical implications for fear of creating yet greater furor. But suppose that he did in fact write down his conclusions, and kept them as a secret addendum to his seminal work, Origin of Species. And suppose his beloved wife Emma, a devout Christian, kept her own secret journal detailing their extraordinary life together, and was the only other person to know of this hidden postscript. Survival of the Fittest is a new novel about a modern-day detective search for these two hugely significant works. Its central character, Maurice, is an eccentric London antiquarian book dealer hired by an equally eccentric American billionaire to track down the documents for his world famous collection of original manuscripts. Maurice's complex investigation ranges across England, and involves him in encounters ranging from the criminal to the romantic and the revelatory. Along the way, he discovers the spiritual struggle within the extraordinary Darwin household, and the effects of that same struggle on the creation of the atom bomb and on modern terrorism. As the hunt becomes more and more intense, the question arises of what to do with the findings. Do we really want to know, or will the answer just stir up a hornet's nest?
