designs are internal and external validity. Internal validity is attained when the evaluator can decide whether a finding is due to the program and cannot be caused by some other factors or biases.

Design Evaluation - an overview | ScienceDirect Topics

If your results are to be reliable, you have to give the evaluation a structure that will tell you what you want to know. That structure – the arrangement of discovery- is the evaluation's design. The design depends on what kinds of questions your evaluation is meant to answer. Some of the most common evaluation (research) questions:

Evaluation - Wikipedia

Unlike processes, you don't perform projects over and over again; they're usually one-time efforts. The metrics of success for any operations management project depends on the objectives that the project is intended to meet. Yet many project leaders spend too little time before launching a project figuring out what they want to achieve. In some [...]
