Polymer electrolyte membrane (PEM) fuel cells (FCs) operate at lower temperatures than other types of fuel cells and are frequently employed in vehicles and personal mobility applications in the aerospace and defense industry. This webinar will focus on the application of the PEMFC module in ANSYS Fluent to both simple and complex fuel cell geometries to help understand the effects of geometric and operating parameters on device performance and thermal management.

Improving the Design of Fuel Cells for the ... - Ansys

ANSYS continues to develop solutions for modeling solid-oxide fuel cells (SOFC) and proton exchange membranes (PEM), as well as other types. For PEM full cells, the focus has been on a complete 3-D model that resolves catalyst layers and membrane separately, rather than assuming that the membrane electrode assembly (MEA) is one infinitesimally thin flat surface.

The ANSYS FLUENT Fuel Cell and Electrolysis Model allows you to model fuel cell stacks as well as individual fuel cells. In the Advanced tab of the Fuel Cell and Electrolysis Models dialog, you can define fuel cell units for each fuel cell in a stack. A fuel cell unit consists of all zones of a single fuel cell in the stack.

A single-phase, 3-D model has been implemented to simulate the fluid flow, heat transfer, electrochemical reactions and species transport in a Proton Exchange Membrane Fuel Cell. The numerical results showed the detailed distributions of mass fractions of hydrogen and oxygen, as well as the heat sources and temperature through five membrane electrode assemblies inside the stack.

Abstract. A comprehensive 3D (three-dimensional) multiphase model of PEMFC (proton exchange membrane fuel cell) is developed, in which the gas and liquid two-phase flow in channel and porous electrodes are investigated in detail. In the simulation of gas and liquid two-phase flow in channels, the effect of surface tension, wall adhesion and gravity is taken into account, including the influence of pressure difference between the inlet and outlet on inlet reactant gas concentration; while in ...
