Graduate Macro Theory II: Notes on Solving Linearized Rational Expectations Models. Eric Sims University of Notre Dame Spring 2017. 1 Introduction. The solution of many discrete time dynamic economic models is a system of non-linear di erence equations. One method for approximating the solution to these models is by log-linearizing the system of equations about a point (typically the steady state), thereby translating the system of non-linear di erence equations into a system of ...

Graduate Macro Theory II: Notes on Time Series. Graduate Macro Theory II: Notes on Time Series. Eric Sims University of Notre Dame Spring 2013. 1 What is a Time Series? A time series is a realization of a sequence of a variable indexed by time. The notation we will use to denote this is  $x_t$ ;  $t = 1, 2, \dots, T$ . A variable is said to be "random" if its realizations are stochastic.
