Version Apache OpenOffice 4.1.7 Apache OpenOffice has several components (Writer, Calc, Impress, Draw, Base...) that share many characteristics on their user interfaces. For this reason the present guide will start to talk about Apache OpenOffice as a whole, then later provide "examples" for each component.

In cell C3, enter the formula C4-C2 (total amount - amount invested in Fund X) as the amount invested in Fund Y. In cells B2 and B3, enter the formula for calculating the interest earned (see below). In cell B4, enter the formula B2+B3 as the total interest earned. Example setup for solver. Choose Tools > Solver.

What is Calc? Calc is the spreadsheet component of OpenOffice.org (OOo). You can enter (usually numerical) data in a spreadsheet and then manipulate this data to produce certain results. Alternatively, you can enter data and then use Calc in a 'What if...' manner by changing some of the data and observing the results
