Manufacturers of Computerized Equipment for the Pharmaceutical Industry Present Descriptions of Mini- & Microcomputers, Peripheral Hardware, & Software Products Suitable for Pharmaceutical Research Labs, Production Plants & Office Facilities; Utilization of the Equipment for Process Control, Etc.

Fluoroplastics, Volume 1, compiles in one place a working knowledge of the polymer chemistry and physics of non-melt processible fluoropolymers with detailed descriptions of commercial processing methods, material properties, fabrication and handling information, technologies, and applications. Also, history, market statistics, and safety and recycling aspects are covered. Both volumes contain a large amount of specific property data which is useful for users to readily compare different materials and align material structure with end use applications. Volume 1 concentrates mostly on polytetrafluoroethylene and polychlorotrifluoroethylene and their processing techniques – which are essentially non-melt-processes – used across a broad range of industries including automotive, aerospace, electronic, food, beverage, oil/gas, and medical devices. Since the first edition was published many new technical developments and market changes have taken place and new grades of materials have entered the market. This new edition is a thoroughly updated and significantly expanded

revision covering new technologies and applications, and addressing the changes that have taken place in the fluoropolymer markets. Fluoroplastics, Volume 1 is an all-encompassing handbook for non-melt processible fluoropolymers – a unique and invaluable reference for professionals in the fluoropolymer industry and fluoropolymer application industries. Exceptionally broad and comprehensive coverage of non-melt processible fluoropolymers processing and applications. Practical approach, written by long-standing authority in the fluoropolymers industry. New technologies, materials and applications are included in the new edition.

Fluorinated Coatings and Finishes Handbook: The Definitive User's Guide, Second Edition, addresses important, frequently posed questions by end-user design engineers, coaters, and coatings suppliers on fluorinated coatings and finishes, thus enabling them to achieve superior product qualities and shorter product and process development times. The book provides broad coverage of these fluorinated polymer coatings, including the best known PTFE, polytetrafluoroethylene, first trademarked as Teflon® and ePTFE (GoreTex®). Their inherent qualities of low surface tension, non-stick, low friction, high melting point, and chemical inertness make fluoropolymer coatings widely desirable across thousands of industrial and consumer applications, but these properties also make it difficult to convert fluoropolymers to coatings that have sufficient adhesion to the substrate to be protected. In this book, readers learn how fluoropolymer coatings are used and made, about their pigments and fillers, binders, dispersion processes, additives, and solvents. The book includes substrate preparation, coating properties, baking and curing processes, performance tests, applications, and health and safety. Provides a practical handbook that covers the theory and practice of fluorinated coatings, including the structure and properties of binders and how to get a non-stick coating to stick to the substrate Covers liquid and powder fluorocoatings, their applications methods, curing and baking processes, and their commercial end uses Presents detailed discussions of testing methods related to fluorocoatings, common coating defects, how they form, how to eliminate them, and the health and safety aspects of using and applying fluorocoatings Includes substrate preparation, coating properties, baking and curing processes, performance tests, applications, and health and safety
