This special issue of the Project Management Journal presents a collection of six articles on managing projects in Africa. Providing a window into the important project activity taking place there, these articles extend both the empirical and theoretical understanding of the African project context and contribute to improving practice. Each article makes a unique contribution to either our understanding of the African project context or project management in general, and sometimes to both. After an introduction to the African project context at the start of the 21st century, the articles explore:

- three different countries as well as multinational projects;
- for-profit, public sector, and development aid projects;
- infrastructure and information and communication technology;

governance as well as project management; and □ partnering challenges.

Carrying out a project as planned is not a guarantee for success. Projects may fail because project management does not take the requirements, wishes and concerns of stakeholders sufficiently into account. Projects can only be successful through contributions from stakeholders. And in the end, it is the stakeholders that evaluate whether they find that the project is a success. To manage stakeholders effectively, you need to know your stakeholders, their behaviours and attitudes towards the project. In Project Stakeholder Management, the authors give guidance on how to adopt an analytical and structured approach; how to document, store and retrieve your knowledge; how to plan your stakeholder interactions in advance; and how to make your plans explicit, at the very least internally. A well-conceived plan can prevent you from being carried away in the 'heat of the moment' and help you spend your limited resources for stakeholder management in the best way.
