Reproductive activity of the goat begins when the females reach puberty, which

## Get Free Introduction To Goat Reproduction Fsa9607

happens at 5 months of age. The ovarian or estrous cycle is the period between two consecutive estrus. It is also the time that lasts the development of the follicle in the ovary, until rupture occurs and ovulation takes place, which coincides with the appearance of estrus. This chapter will describe the ...

Goats do not have to be slaughtered to harvest the wool, which is instead sheared (cut from the body) in the case of Angora goats, or combed, in the case of Cashmere goats. However the Angora goat usually gets shorn twice a year with an average yield of about 10 pounds while the Cashmere goat grows its fiber once a year and it takes about
