The practice of business is changing. More and more companies are amassing larger and larger amounts of data, and storing them in bigger and bigger data bases. Consequently, successful applications of data-driven decision making are plentiful and increasing on a daily basis. This book will motivate the need for data and data-driven solutions, using real data from real business scenarios. It will allow managers to better interact with personnel specializing in analytics by exposing managers and decision makers to the key ideas and concepts of data-driven decision making. Business Analytics for Managers conveys ideas and concepts from both statistics and data mining with the goal of extracting knowledge from real business data and actionable insight for managers. Throughout, emphasis placed on conveying data-driven thinking. While the ideas discussed in this book can be implemented using many different software solutions from many different vendors, it also provides a quick-start to one of the most powerful software solutions available. The main goals of this book are as follows: to excite managers and decision makers about the potential that resides in data and the value that data analytics can add to business processes and provide managers with a basic understanding of the main concepts of data analytics and a common language to convey data-driven decision problems so they can better communicate with personnel specializing in data mining or statistics.

The economic crisis of 2008–2009 was a transformational event: it demonstrated that smart people aren't as smart as they and the public think. The crisis arose because a lot of highly educated people in high-impact positions— political powerbrokers, business leaders, and large segments of the general public—made a lot of bad decisions despite unprecedented access to data, highly sophisticated decision support systems, methodological advances in the decision sciences, and guidance from highly experienced experts. How could we get things so wrong? The answer, says J. Davidson Frame in Framing Decisions: Decision Making That Accounts for Irrationality, People, and Constraints, is that traditional processes do not account for the three critical immeasurable elements highlighted in the book's subtitle— irrationality, people, and constraints. Frame argues that decision-makers need to move beyond their single-minded focus on rational and optimal solutions as preached by the traditional paradigm. They must accommodate a decision's social space and address the realities of dissimulation, incompetence, legacy, greed, peer pressure, and conflict. In the final analysis, when making decisions of consequence, they should focus on people – both as individuals and in groups. Framing Decisions offers a new approach to decision making that gets decision-makers to put people and social context at the heart of the decision process. It offers guidance on how to make decisions in a real world filled with real people seeking real solutions to their problems.

As the age of Big Data emerges, it becomes necessary to take the five dimensions of Big Data- volume, variety, velocity, volatility, and veracity- and focus these dimensions towards one critical emphasis - value. The Encyclopedia of Business Analytics and Optimization confronts the challenges of information retrieval in the age of Big Data by exploring recent advances in the areas of knowledge management, data visualization, interdisciplinary communication, and others. Through its critical approach and practical application, this book will be a must-have reference for any professional, leader, analyst, or manager interested in making the most of the knowledge resources at their disposal.
