The International Science Congress Association organized the 2nd International Science Congress (ISC-2012) with 'Science and Technology - Challenges of 21st Century' as its focal theme. ISC-2012 was divided in 20 sections. A total number of 800 Research Papers and 1200 registrations from 23 countries all over the world have been received. They was mainly from Bangladesh, Bulgariya, Cameroun, France, Greece, Iran, Iraq, Kazakhstan, Korea, Lithuania, Malaysia, Nigeria, Nepal, Phillipines, Pakistan, Poland, Romania, Slovakiya, USA, Ukraine, Venezuela, Turkey and India.

Innovation has become the new buzzword across the globe. International organisations, governments, corporates, academia and society see it as the answer to the major economic, social and environmental transformations challenging the models of the 20th century. Innovations are occurring worldwide and alternative solutions to the existing problems are emerging in all sectors: electric cars, organic farming, renewable energy and e-learning are good examples. These alternatives can be ascribed with qualities such as decentralized frugal, flexible, smart and democratic, virtues that are lacking in conventional models. They are attributed with the potential to meet the overall global challenges such as climate change and the growing inequalities between and within countries. What is the real potential of innovation? Does the rapid deployment of innovations lead towards a more sustainable and inclusive society? Can innovations and the emerging alternatives replace conventional models? Beyond technologies, what institutional innovations are required to support sustainable development? A Planet for Life 2014 aims to answer these questions and explore innovation in all its aspects, through a series of texts written by international experts. The objective of this book is to analyse experiences from across the world and the role of innovation in a variety of areas of development such as urbanization, agriculture and food, the mobility of people and freight, education and the provision of water and energy to all.

Composed of two extensive sections, this book surveys important work in climate change science, mainly in the United States, and introduces contributions to the body of science that have arrived on the scene between January 2013 and February 2014. The opening section offers a broad examination of contemporary climate change science, with subsections on the Intergovernmental Panel on Climate Change (IPCC); Earth ' s energy imbalance and energy flow; carbon dioxide ' s role in the greenhouse effect; climate forcing, and climate feedbacks; Charles David Keeling and the Keeling Curve; the interfaces of atmosphere with oceans and land; paleoclimates and paleoclimatology; rising sea level; melting glaciers; deforestation; desertification; more violent storms, animal and human migration, extinction of species and more. The second section reviews and assesses the newest contributions to the body of research. Among the topics discussed are current and recent research on rising temperatures; the BEST study; the Global Historical Climatology Network (GHCN) and the National Climatic Data Center (NCDC); current and recent research on climate models, new research on global warming 56 million years ago; ecosystem impacts, projections of future climate and more. This book can be considered a bridge between the volumes of Farmer and Cook ' s Climate Change Science: A Modern Synthesis, as it arrives between the release of the first volume on the Physical Climate (2013) the second, on Earth ' s climate history, which is now in preparation. The book benefits a wide audience as its survey of the science of climate change provides an introduction to the subject and a discussion of current research in the field. The book may be used as a refresher for those who have had prior courses in climate science and related fields. Each chapter includes a comprehensive list of references for subjects discussed in the text.

The media environment of today is characterised by two critical factors: the development and adoption of ubiquitous mobile devices, and the strengthening of connectivity enabled by advances in ICT infrastructure and social media platforms. These developments have changed interactions and relationships between citizens and cultural custodians, as well as the ways archives are developed, kept, and used. Archives are now characterised by greater socialisations and networks that actively contribute to the signification of cultural heritage value. A range of new stakeholders, many of whom include the public, have sought to define what needs to be collectively remembered and forgotten. The world in which one or a few professional archivists worked on the sole mission of shaping how a society remembers is being displaced by a more democratised culture and the new generation of digitally networked archivists that are its natives. Using a range of case studies and perspectives, this book provides insights to the many ways that ubiquitous media have influenced archival practices and research, as well as the social

and civic consequences of present-day archives. This book was published as a special issue of Archives and Manuscripts.

New approaches to both cultural landscapes and historic urban landscapes increasingly recognize the need to guide future change, rather than simply protecting the fabric of the past. Challenging traditional notions of historic preservation, *Conserving Cultural Landscapes* takes a dynamic multifaceted approach to conservation. It builds on the premise that a successful approach to urban and cultural landscape conservation recognizes cultural as well as natural values, sustains traditional connections to place, and engages people in stewardship where they live and work. It brings together academics within the humanities and humanistic social sciences, conservation and preservation professionals, practitioners, and stakeholders to rethink the meaning and practice of cultural heritage conservation, encourage international cooperation, and stimulate collaborative research and scholarship.

Innovation has become a buzzword that promises dramatic changes in almost every field of business. Absent from this attention is a serious discussion of the ethical sides of dramatic change. To address this, editors Georges Enderle and Patrick E. Murphy gather a team of experts to fully examine the ethics of innovation within business and the economy in this standout addition to the *Studies in TransAtlantic Business Ethics* series.

*Strategic Sustainability* examines how organizations can implement environmental sustainability science, theories, and ways of thinking to become more competitive. Including examples and ideas implemented in various countries, it is based on known scientific principles about the natural world and organizational principles focusing on the work domain. The intersection of these two realms of research creates a powerful and new approach to comprehensive, seemingly contradictory issues. Daniel S. Fogel draws from disparate fields and creates a story about organizations, their future and how people are part of the problem and, more importantly, part of the solution. Readers will find ways to take action to improve organizations and avoid denigrating our natural environment, learning to be mindful of the urgency we should feel to improve our impact on the world. The focus on the natural environment provides a powerful focus for creating value in organizations and addressing the major challenges we all face. Advanced sustainability students, working professionals and board members, managers and legislators responsible for governing organizations or implementing public policy will find this book useful. A companion website features an instructor's manual with test questions, as well as 38, 10-minute videos for classroom use.

Which is the role of the European Union in dealing with crises that go beyond the nation states borders – terrorism, proliferation of weapons of mass destruction, regional conflicts, state failure, organised crime, natural and man-made disasters? The authors assess the main challenge for the EU: the need to operate in a multidimensional setting where with a wide range of actors, such as member states, national and international NGOs, international organisations (NATO and the UN in primis), as well as a wide range of activities, rules and norms are generated for these diversified crises.

This book describes the four Nuclear Security Summits held over 2010-2016 at the initiative of U.S. President Barack Obama. The author draws upon his unique vantage point as a participant in the Summits, exclusive interviews with practitioners, and access to primary documents, to write an engaging history of the NSS and of nuclear security in general. The story of the NSS is also in part the story of multilateral nuclear forums, which have sprung up regularly since the dawn of the nuclear age to address perceived nuclear dangers. The success of these Summits in addressing the threat of nuclear terrorism holds important lessons for the design and work of nuclear forums today and into the future. The author presents a new approach to assessing 'international learning' that has important implications for the design of multilateral forums and updates the Cold War areas of nuclear knowledge being 'learnt' in the light of the NSS experience and other recent developments. This work will be of interest to scholars and practitioners in security studies, nuclear history, and International Relations.

We all long for someone to offer us unconditional love and support. But what if that person is us? The practice of mindful self-compassion creates the space we need so that observation, acceptance, and real love can enter, no matter how judgmental or disconnected we may feel. It sounds like a simple idea: to be kind to yourself. But if you pay attention to your thoughts, habits, and self-talk, you may find that it's more difficult than it sounds. The intentional practice of self-compassion, outlined here by Buddhist scholar and teacher Bodhipaksa, can help you find greater overall wellbeing, emotional resilience, physical health, and willpower. Bodhipaksa provides both the why and the how of mindful self-compassion, drawing on contemporary psychology and neuroscience and also on Buddhist psychology, weaving the modern and ancient together into a coherent whole. Contemporary psychologists are focusing less on self-esteem and more on self-compassion. Bodhipaksa, a practicing meditator of more than thirty years, effortlessly blends ancient techniques dating back to the time of the Buddha with the most recent understanding of psychology and neuroscience. And in the end, as Bodhipaksa writes, it is actually quite simple: "Life is short. Be kind."
