What is leadership? Not only has that question been debated since the beginning of human culture and society, but it's a moving target based on the definer, and the epoch. The definition can be thought-provoking and profound: A leader is best when people barely know he exists, not so good when people obey and acclaim him, worse when they despise him, (Lao Tzu, 6th century BC ). Or the profundity may lie shrouded in the prosaic: A leader is one who has followers, (Peter Drucker, 20th century). However you define the concept, today's challenges for leaders of all stripes are monumental, and the need for effective leadership is huge. More than anything, this set travels farther and digs deeper than most leadership books. It takes us from mere explanations of leadership to an understanding of it as part of the human condition. Reading it should be at the top of the to-do list for any leader in any era. In Leadership at the Crossroads, contributors from a wide variety of fields, including management, economics, political science, philosophy, sociology, history, literature, and psychology, explore the many facets of leadership. The set comprises: Volume 1: Leadership and Psychology; Volume 2: Leadership and Politics; Volume 3: Leadership and the Humanities. Collectively, this set showcases traditional and emerging approaches to leadership in both theory and practice and raises new questions brought on by society's new challenges. It also suggests solutions for developing and promoting leadership in the corporate world, politics and diplomacy, religion, education, non-profits, and the arts. Whether identifying qualities that will serve a U.S. president well, or the characteristics of the essential can-do supervisor in today's corporation, Leadership at the Crossroads supplies insights and intelligence that will help leaders make the most of the challenges and opportunities lying before them.

Multiple personality syndrome is being diagnosed and treated in the United States in ever increasing numbers. Indeed, it is alleged that the incidence of this bizarre and striking disorder has reached epidemic proportions. Clinician/researchers report each seeing individually more than 100 patients whose minds have split into as many as 60 alter egos. Their case histories are typified by sexual and physical abuse in childhood and some have reached notoriety; in films, like Eve and Sybil and in criminal records, like Bianchi, 'the Hillside Strangler'. But does 'multiple personality' exist? This monograph takes as its point of departure the virtual absence of such patients anywhere except the U.S.A. and even then it is a relatively small number of psychologists and psychiatrists who report the overwhelming majority of cases. The book provides the first comprehensive review of the burgeoning literature from the beginning of the century to the present and covers more than 300 articles and books. It should prove of interest to psychologists, psychiatrists, psychotherapists and social workers and is an invaluable reference for students on courses in clinical and abnormal psychology as well as to practising clinicians and social workers. Following an introduction to a selection of the more notable cases, a number of critical issues are examined in ensuing chapters. These are devoted to problems of definition and differential diagnosis; aetiology; psychophysiological, psychometric and experimental studies; attempts at theoretical explanation and the relationship between MPS, hypnosis and dissociation. The author, a practising clinical psychologist and lecturer in psychopathology, gradually develops the hypothesis that MPS is best explained under the rubric of social role theory. It is argued that MPS is a culture-bound variant of hysterical psychosis occurring in individuals with high 'hypnotisability'. The tentative conclusion is that even if one accepts the reality of MPS it is unhelpful to regard it as a discrete clinical entity, and it is being grossly overdiagnosed.s It should prove of interest to psychologists, psychiatrists, psychotherapists and social workers and is an invaluable reference for students on courses in clinical and abnormal psychology as well as to practising clinicians and social workers. These transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the semantic web, social networks and multi-agent systems. TCCI strives to cover new methodological, theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies, such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This twelfth issue contains 10 carefully selected and thoroughly revised contributions.
