Each Cirrus Test Prep study guide includes: a detailed summary of the test's format, content, and scoring; an overview of the content knowledge required to pass the exam; worked-through sample questions with answers and explanations; full-length practice tests including answer explanations; and unique test-taking strategies with highlighted key concepts. Cirrus Test Prep's study materials ensure that new educators feel prepared on test day and beyond.

This is a comprehensive and unique text that details the latest research on smell and taste disorders for use by clinicians and scientists.

In the present era various international organizations, such as FAO, UNO, IAEA, FNCA, etc., have unanimously agreed that millions of people in both developing and developed countries are not only facing a shortage of food, but also non-availability of nutrients. The main reason put forward by these agencies is that there is less genetic diversity prevalent in the major crops, which has been further diminished since the inception of conventional plant breeding. Since the first decade of the last century the mutation breeding approach has been pivotal in enhancing the genetic diversity of crops, thereby enriching the genetic pool. ' Mutagenesis: exploring genetic diversity of crops ' describes the latest achievements in mutation breeding, with a particular focus on the development of novel mutant varieties and F1 hybrids of crops highly superior to the parental ones. The book details experimental as well as literary studies of induced mutagenesis and its role in developing the new potent varieties. The book will be useful for agricultural policy making authorities in countries of agricultural importance, scientific researchers, breeders, teachers and students keen to use mutation breeding and to explore its hidden potential to secure food and nutrient availability for the growing world population.

This text provides a detailed approach to software quality improvement based on six years of successful quality management at Tokheim and participation in several EEC-funded projects. It provides all of the information that is required to set up a quality improvement programme.

Western societies are witnessing an emerging socio-legal trend towards transnational civil litigation against multinational corporations in relation to harm caused toward people and the planet. These 'foreign direct liability cases' arise against the background of a global governance gap resulting from the rapid globalization of economic actors and activities with no global institutions to manage their worldwide impacts. The increasing reliance on private law mechanisms to realize corporate accountability for violations of human rights, health and safety, and environmental and labor norms perpetrated around the globe raises interesting and complex issues. This study sets out the legal and socio-political framework of this particular type of transnational civil litigation. The book traces the role that Western systems of tort law may play in promoting international corporate social responsibility/accountability. It focuses on the feasibility of bringing foreign direct liability claims before domestic courts in the EU Member States - the Netherlands in particular - and sets out a number of recommendations for European policymakers.

In this book, we focus on children with anxiety disorders and the children whose parents were diagnosed with anxiety disorders in their lifetime. The aim is to investigate the different types of anxiety disorders with different underlying mechanisms. The developmental perspective will support a better understanding of the development of anxiety disorders and transition from childhood to adulthood. We believe this book will appeal to a wide audience of practicing psychiatrists, psychologists, psychiatric nurses, social workers and mental health professionals. It is our hope that many will find this book useful for training mental health professionals to give them the newest developmental point of view about prototype anxiety disorders. We dedicate this book to our lovely families, patients, and their families.
