Currency Risk Management (CRM) is vital for any business engaging in international trade. Fluctuations and uncertainty within currency markets mean that businesses must seek to effectively manage and anticipate potential risks when striking international deals. In a rapidly changing and volatile global business environment, CRM is now more than ever of critical importance. However, what risks should businesses hedge – and how? With so many viable strategies for hedging currency exchange risk, it is crucial that businesses either outsource or have a specialized team to ensure effective and efficient management of currency exchange risks. But how does CRM operate in an emerging market? And what are the key factors that influence the chosen CRM strategies? Organized in association with Indian Bank, GITAM's national conference on CRM sought to highlight the trends, problems, and prospects of CRM in India. Taken from the conference proceedings, this book presents 9 innovative research papers that consider differing CRM practices. From a comparative study of India and China to an assessment of CRM strategies used by commercial Indian banks, this book offers an invaluable insight into CRM from the perspective of an emerging market. As a whole, this book addresses India's shift to a market-determined exchange rate regime and the inevitable problems caused by the high volatility of exchange rates. Aimed at students enrolled in commerce and management courses, this collection of research papers will also be of interest to researchers in international finance.

The Intergovernmental Panel on Climate Change 4th Assessment Report (AR4) concluded that climate change will have significant impacts on many aspects of biological diversity: On ecosystems, species, genetic diversity within species, and on ecological interactions. The implications of these impacts are significant For The long-term stability of the natural world and For The many benefits and services that humans derive from it. This report reviews the literature since the AR4. it draws on recent research to summarise advances in our understanding of the impacts of climate change on biodiversity. The evidence For The impacts on biodiversity comes from three principal sources. First, from direct observation of changes in components of biodiversity in nature that can be clearly related to changes in climatic variables. Second, experimental studies using manipulations to elucidate responses to climate change. Finally, and most widely, from modelling studies where our current understanding of the requirements and constraints on the distribution of species and ecosystems are combined with modelled changes in climatic variables to project the impacts of climate change and predict future distributions and changes in populations.

In January 1976, Raymond Barre, the first President of The Geneva Association, and Orio Giarini, its first Secretary General, founded The Geneva Papers on Risk and Insurance with the main goal of supporting and encouraging research in the economics of risk and insurance. At that time, research in the field of insurance was still embryonic and insurance was regarded as peripheral social activity. When sustained economic growth gained traction, the function of insurance gradually emerged as a key contributor to economic development. By integrating uncertainty into economic theory and benefiting from the progress of both financial economics and decision theory, research developed further in the field of insurance economics and risk management, and is now prolific. The Geneva Papers on Risk and Insurance undeniably contributed to this evolution and its impact on research in insurance has largely exceeded what its two founding members could have expected. This volume is a special collection of papers celebrating 40 Years of The Geneva Papers on Risk and Insurance. The collection looks back at the storied history of The Geneva Papers on Risk and Insurance and features papers from some of the esteemed authors who have contributed to the journal in its lifetime. This collection of papers highlights just a few of the many themes addressed in the papers published by the journal since it was created. Nevertheless, the selection exemplifies the richness and variety of topics the field of insurance covers.

The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. Occupational Health and Safety in the Care and Use of Nonhuman Primates is intended as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-making in developing an optimal program that meets all particular institutional needs.
