Book 1, SIMPLE SOLUTIONS for Planet Earth, dealt with energy and the environment. SIMPLE SOLUTIONS for Humanity provides ultimate answers for our society and beyond. Ever wonder if there could ever be a way to end crime and war forever, or the prospects for immortality, or a better educational system, or the reality of extraterrestrial intelligence, or the future of religion? If all the above can be satisfactorily resolved, then, just in case there is no afterlife, where is the best place to live on Earth today? Simple solutions, of course, are hardly that. How to end crime? What about three strikes and you're dead! Sure this should work, but it's not morally rational. The solution to war is incredibly simple. Just read the book and find out how. Scientists are getting very close to determining a way to disarm our aging gene.

When will this happen? Our educational system is flawed. Be prepared to be shocked by the Stanford Marshmallow Study. Then find out that our terrible student scores relative to the developed world might not be worth all the anguish. The USA will prevail because of our superiority in.... Could the solution for world peace or curing cancer be streaming in from space? The Search for Extraterrestrial Intelligence could someday soon detect what would be the most monumental discovery since the invention of God. How can religion overcome the immorality of purporting to promise an afterlife WITHOUT ANY PROOF? A Golden Evolution is suggested. Are you one of those who largely wasted your life looking out only for yourself, family and friends? Could there be a higher calling? You, too, can make a positive difference. Rainbow Vision is explained to equip you with the tools to help save Planet Earth and Humanity.

A brand-new book from the award-winning SUNDAY TIMES journalist Brian Appleyard. Simplicity has become a brand and a cult. People want simple lives and simple solutions. And now our technology wants us to be simpler, to be 'machine readable'. From telephone call trees that simplify us into a series of 'options' to social networks that reduce us to our purchases and preferences, we are deluged with propaganda urging us to

abandon our irreducibly complex selves. At the same time, scientists tell us we are 'simply' the products of evolution, nothing more than our genes. Brain scanners have inspired neuroscientists to claim they are close to cracking the problem of the human mind. 'Human equivalent' computers are being designed that, we are told, will do our thinking for us. Humans are being simplified out of existence. It is time, says Bryan Appleyard, to resist, and to reclaim the full depth of human experience. We are, he argues, naturally complex creatures, we are only ever at home in complexity. Through art and literature we see ourselves in ways that machines never can. He makes an impassioned plea for the voices of art to be heard before those of the technocrats. Part memoir, part reportage, part cultural analysis, *THE BRAIN IS WIDER THAN THE SKY* is a dire warning about what we may become and a lyrical evocation of what humans can be. For the brain is indeed wider than the sky.

The third edition of this well known text continues to provide a solid foundation in mathematical analysis for undergraduate and first-year graduate students. The text begins with a discussion of the real number system as a complete ordered field. (Dedekind's construction is now treated in an appendix to Chapter I.) The topological background needed for the development of convergence, continuity, differentiation and integration is provided in Chapter 2. There is a new section on the gamma function, and many new and interesting exercises are included. This text is part of the Walter Rudin Student Series in Advanced Mathematics.

The book contains 80 different types of algebra equations together with explanations, answers and solutions. It helps a learner to understand the logic behind algebra equations and to build their algebraic self confidence.
