Beta The Interactive Night Sky Map simulates the sky above New York on a date of your choice. Use it to locate a planet, the Moon, or the Sun and track their movements across the sky. The map also shows the phases of the Moon, and all solar and lunar eclipses.

Night Sky Map & Planets Visible Tonight

Find a safe place to stargaze, preferably away from the glare of artificial lights. Turn to face south (the Sun sets approximately to your right) with north at the top of the page; the lower half of the chart will represent the southern region of sky you are facing. Turn around and face north, rotate the map so that south is at the top; the lower half of the chart will now represent the northern region of the sky you are facing.
