The momentum of the system before (i) and afterwards (f) will be the same. In equation form, for a collision between two objects (1 and 2): $p_{1,i} + p_{2,i} = p_{1,f} + p_{2,f}$.
 $(m_1v_1)_i + (m_2v_2)_i = (m_1v_1)_f + (m_2v_2)_f$.

If the net force acting on an object is zero, then its momentum is conserved. Some forces in one direction may be zero while another direction will have several forces. For example, a ball in free fall would have a net force of zero in the x direction while the y direction's net force is not equal to zero in that specific case.

When we deal with momentum, conservation usually means one object transferring its momentum to another after a collision (think boulder to Jones); energy is again slightly more abstract. Conservation of energy can involve transfer of energy in collisions, but also covers the conversion of energy into different forms within the same object.
