## The Albumen And Salted Paper

The Albumen and Salted Paper Book is a book about the major photographic printing processes in use during the years 1840 - 1895, approximately the first half-century of photographic history. These first 50 years of photography established a tradition of individual experimentation and craftsmanship in which each photographer (of necessity) participated in the manufacture of the printing materials he or she used.

A detailed explanation of the tone reproduction characteristics of albumen and salted papers will be given in Chapter 7, but briefly stated, the more matte-surfaced a paper is, the lower the contrast of that material is likely to be. Albumen paper, therefore, requires a less contrasty negative than plain salted papers.

---

## Chapter 3. The Albumen & Salted Paper Book

While salted paper prints are comprised of a single layer of paper support that contains the image particles, albumen prints have two layers. When albumen (egg white) was applied to the paper support, a binder layer was also created. In an albumen print, the image sits in the binder rather than in the paper fibers as in a salted paper print.

Albumen paper, albumen also spelled Albumin, light-sensitive paper prepared by coating with albumen, or egg white, and a salt ( e.g., ammonium chloride) and sensitized by an aftertreatment with a solution of silver nitrate. The process was introduced by the French photographer Louis-D é sir é Blanquart-É vrard in about 1850 and was widely used for about 60 years thereafter.
