Paul Zoll MD is an engaging account of the life and work of Dr. Paul M. Zoll, the physician and medical researcher behind the treatments and techniques we use today to save victims of heart attacks and to prevent premature deaths from other forms of heart failure. The book tells how one man's compassion, insight, intelligence and perseverance solved medical mysteries that had plagued people through the ages. The biography also shows the human dimensions of Dr. Zoll, including his childhood, education, military service, family relationships, recreational interests and social associations throughout his life, from 1911 to 1999. But the book's primary topic is Dr. Zoll's contributions to medicine, especially his breakthroughs in cardiac care and his development of closed-chest pacemakers and defibrillators, implantable pacemakers and heart monitors. The biography positions Zoll as a leading pioneer in cardiac care, whose innovations and ideas changed the field. Through carefully documented historical analysis, the book shows how Dr. Zoll was the creator and the first physician to successfully employ devices that are the fore bearers of life-saving implements commonly used today. The author, Dr. Stafford I. Cohen, was a medical resident under Dr. Zoll and, later, a colleague at Beth Israel Hospital in Boston. His book is the first full-length biography of Dr. Zoll. It strives for historical accuracy and gives a fair and balanced assessment of Zoll's life and work. Paul Zoll MD firmly establish Paul M. Zoll as a first-in-the-world innovator whose treatments and inventions make him the father of modern electrocardiac therapy - a man to whom we owe a great deal today.

The official textbook of the Acute Cardiovascular Care Association (ACCA). The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment. The ESC Textbook of Intensive and Acute Cardiovascular Care is the official textbook of the Acute Cardiovascular Care Association (ACCA) of the ESC. This new updated edition continues to comprehensively approach all the different issues relating to intensive and acute cardiovascular care. The textbook is addressed to all those involved in intensive and acute cardiac care, from cardiologists to emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment, but also organisational issues, cooperation among professionals, and interaction with other specialities in medicine. The largest section of the textbook is devoted to non-cardiac disease which could acutely involve the cardiovascular system. Other noteworthy chapters are on ethical issues - which are so important in acute cardiac care, such as patient safety, donor organ management and palliative care. A unique characteristic of the textbook is the presence of a whole section devoted to biomarkers, which underline the growing importance of laboratory medicine in the field of intensive and acute cardiac care. A particular asset of the textbook is the digital version available on Oxford Medicine Online, which has additional online features including an extra chapter on lung ultrasound and many more images and videos, as well as a full list of references from all chapters. The online version is updated by the same authors on a yearly basis and is available with the print version and separately on a subscription basis, allowing easy access to content in digital and mobile optimised format. The textbook aligns directly with the core training curriculum for ACCA.
